

Reporting and Analytics

Analyzing the data generated by your security infrastructure is challenging. Raw traffic and event data aren't very easy to wrap your head around – especially when it's generated by multiple infrastructure components. Moreover, even once the data is collected and organized, deriving enough meaningful insight to make the data actionable adds another real-world challenge.

Reporting and Analytics from the OPAQ Cloud

Purpose-built analytics delivering timely operational insight

No more keeping up with the latest log formats, worrying about storage or performance of your security analytics capability, or how you can get data easily from one security solution into the next. OPAQ's Reporting and Analytics solution takes the effort out of getting value from your security service investment by collecting and managing the security data produced by your OPAQ service while automating the transformation into insightful and actionable information. Whether you'd like reporting for one day or one year, OPAQ empowers you with the tools to produce information about your service you can immediately use to manage network operations and security concerns.

OPAQ's Reporting and Analytics is part of the OPAQ Cloud enterprise-grade security platform that includes Firewall-as-a-Service and Endpoint Protection-as-a-Service – integrated and delivered via OPAQ's fully-encrypted secure SD-WAN.

Why OPAQ Reporting and Analytics?

- **Actionable.** The reports and analytic workbenches delivered by OPAQ pinpoint users, applications, and host that effect your network and security operations the most, enabling you to dig into the data quickly and take action within the OPAQ 360 cloud console to tune the configuration of your environment.
- **Continuous.** Data is collected, normalized, and analyzed continuously to generate metrics and reporting results.
- **Customized.** Reports can be customized with logos and additional content for a unique output that is your own.
- **Discover patterns.** OPAQ reporting and analytics discovers anomalies in user behavior for bandwidth utilization, threat events, and blocked websites.
- **Efficient.** Enable security personnel to spend their time making the security service better and dig deeper into data quickly. The OPAQ reporting and analytics solution works with all OPAQ service offerings, so you have one place to look for your security platform data needs.
- **Fast.** Reports generated by the OPAQ platform typically take seconds to generate for daily and weekly reports.
- **Immediate availability.** From day one of signing up for OPAQ service, your reporting and analytics capability is available without any need for configuration, tuning, or management of data or compute infrastructure.
- **Repeatable.** Establishing the right content to develop a regular security reporting regimen can take months in itself. OPAQ gets you off and running from day one with great-looking results that make reporting easy.
- **Accessible.** If you already have a custom-built reporting solution, you can easily integrate with our API to deliver the same insights that you get through our metrics console.

Why OPAQ Reporting and Analytics?

- **Automated collection of security and network information:** automated collection, normalization and transformation of data generated by the OPAQ services.
- **Security and Network operations metrics and reporting:** Continuous monitoring and measurement of security and network operations to prioritize tasks and enable communications to technical and non-technical decision-makers.
- **Fully customizable report:** Allows partners and customers to white label and incorporate their own content within the wrappings of OPAQ's default report containers.
- **Metrics dashboards:** Analytic workbenches used to investigate security events and network service utilization within your OPAQ network environment. These help you to derive actionable information about users, applications, and hosts that contribute the most to network utilization or security threat events.

About the OPAQ Cloud

OPAQ is the premier network security cloud company. OPAQ's cloud platform enables partners to deliver Fortune 100-grade security-as-a-service to midsize enterprises on a fully encrypted software-defined network optimized for speed and performance. With OPAQ, service providers are equipped with a simplified ability to centrally monitor security performance and compliance maturity, generate reports, manage security infrastructure, and enforce policies – all through a single interface. This empowers OPAQ partners to grow revenue and margins, eliminate complexity and costs, and establish a competitive advantage that helps them attract and retain customers. Based in Northern Virginia, OPAQ is privately held and is funded by Greenspring Associates, Columbia Capital, Harmony Partners, and Zero-G, Inc. To learn more, visit www.opaq.com.
